**SPECIAL SCIENTIFIC REPORT-FISHERIES No. 303**

**UNITED STATES DEPARTMENT OF THE INTERIOR  
FISH AND WILDLIFE SERVICE**

### Explanatory Note

The series embodies results of investigations, usually of restricted scope intended to aid or direct management or utilization practices and as guides for administrative or legislative action. It is issued in limited quantities for the official use of Federal, State, or cooperating Agencies and in processed form for economy and to avoid delay in publication.

PHYSICAL OCEANOGRAPHIC, BIOLOGICAL, AND CHEMICAL DATA  
SOUTH ATLANTIC COAST OF THE UNITED STATES  
M/V THEODORE N. GILL CRUISE 8

This is the eighth in a series of reports presenting basic data from cruises of the Theodore N. Gill in waters off the South Atlantic coast of the United States.

Background of the investigations; objectives; procedures on station; and chemical, biological, and oceanographic methods and procedures were presented in the report for Cruise 1 (Anderson, Gehringer, and Cohen, 1956). Biological methods and procedures were the same as those modified on Cruise 3 (Anderson and Gehringer, 1957). The basic station plan is shown in figure 1.

NARRATIVE ACCOUNT OF CRUISE 8

The Gill departed from Brunswick, Georgia on August 27, 1954 to begin the southern leg of the cruise. The passage of three hurricanes delayed operations during the early stages of the cruise and caused cancellation of special stations 5 through 8 and the standard station, all of which were usually worked at the start of a cruise. On August 29, in the vicinity of Grand Bahama Bank, the vessel experienced a damaged rudder and was towed by the U. S. Coast Guard to Miami, Florida for repairs. These were completed on September 3, and the vessel proceeded to Nassau, B.W.I., arriving on September 4. Equipment was loaded and installed in Nassau for special ambient work by Columbia University personnel, but strong winds and continued heavy rain squalls were experienced during the time allotted for the work, and it was cancelled to avoid disruption of the remainder of the cruise schedule. The Gill sailed on September 10 from Nassau for regular station 1, arriving at and occupying that station on September 11. Good weather prevailed during the remainder of the southern leg of the cruise, and the vessel occupied regular stations 1 through 34, and special station 9, arriving back in Brunswick, Georgia for supplies on September 15.

On September 20 the vessel departed Brunswick to begin the northern leg of the cruise. Adverse weather characterized the early stages of this leg and this, together with Loran trouble, forced the vessel into Charleston, South Carolina on September 22. The weather improved on September 25, and operations were resumed. Regular stations 40, 41, 42, and 76 and special stations 1 through 4 were not occupied because of adverse weather conditions. The vessel returned to Brunswick on October 1.

Seventy-seven hydrographic stations were occupied (76 regular and 1 special) with Nansen casts and bathythermograph lowerings on each station. Determinations for dissolved oxygen were run aboard vessel for all stations and all levels except for regular stations 32, 33, and 34. Water samples were obtained from all stations and levels for shore analysis of salinity, total phosphorus, inorganic phosphate, carbohydrates, proteins, and nitrate-nitrite. Bottom samples were taken with a modified orange-peel dredge on those stations where several samples had not been collected on previous cruises. Attempts were made to secure bottom sediments with a modified Phleger corer on a number of inshore stations, but the bottom over most of this area was too hard for effective penetration by this corer. Secchi disk readings were taken during daylight hours when conditions permitted. Oblique plankton tows (surface tows in shallow water) were made with the Gulf III all-metal plankton sampler on all stations occupied. Fifty runs between stations were obtained with the Gulf IA high-speed plankton sampler, and 28 runs were obtained with the continuous plankton sampler. Dip-net fishing was carried out both at night (under a light) and during the day while on station--results were fair on the southern leg and poor on the northern leg. Trolling with feather and bone jigs between stations yielded fair results.

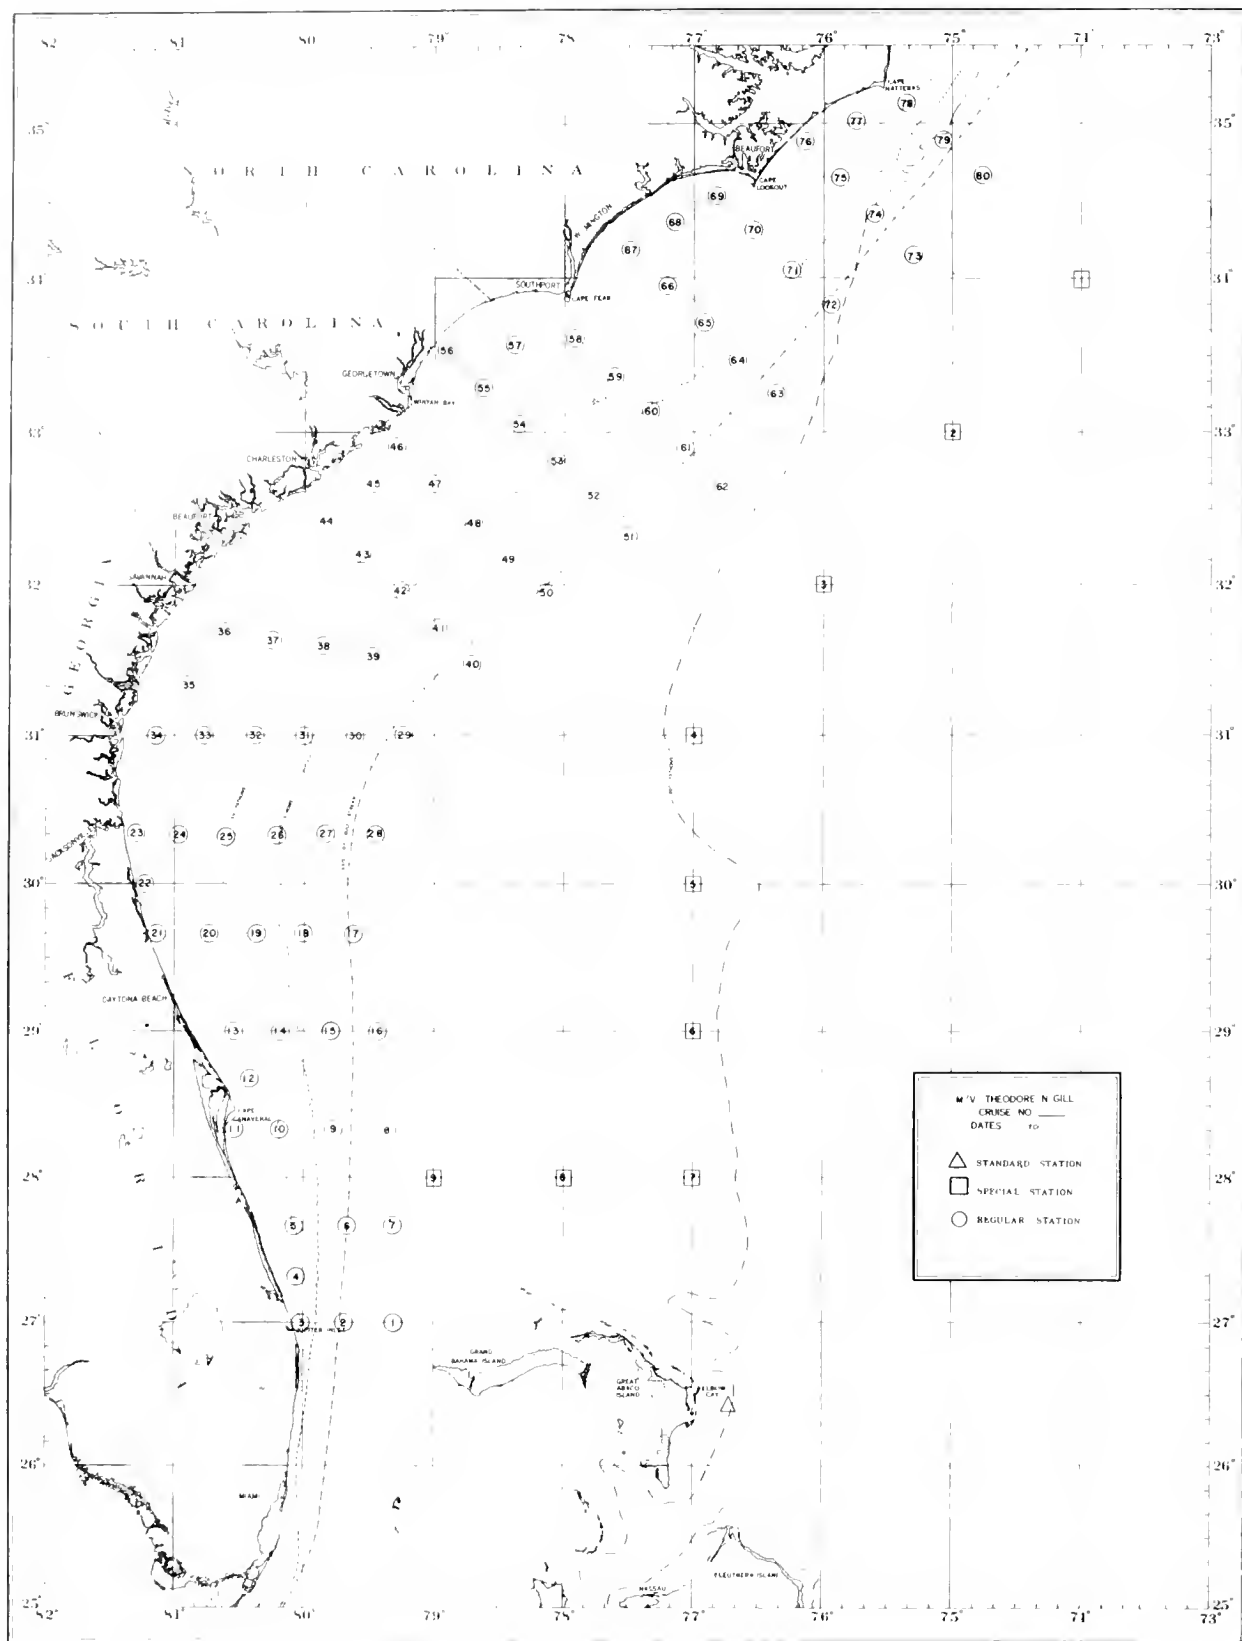

Figure 1.--Basic station plan.

Figure 2.--Track chart.

Figure 3.--The Gill, with damaged rudder, under  
tow of U.S. Coast Guard Cutter Agassiz.

Figure 4.--Difficult working conditions.

Twelve drift bottles were released for the Woods Hole Oceanographic Institution on each of the inshore stations. The bottles used were 8-ounce, clear glass soda bottles approximately 22 cm. high and 6 cm. in diameter. To reduce wind drift the bottles were ballasted with clean dry sand, so that they floated vertically at or near the surface. The tabulated results are given in table 16.

Scientific personnel participating in the cruise were:

#### J. Southern Leg

##### Fish and Wildlife Service:

William W. Anderson	Chief Scientist
Jack W. Gehringer	Fishery Research Biologist
Edward Cohen	Chemist
Charles P. Goodwin	Chemical Aid

##### Navy Hydrographic Office:

Melvin Light	Senior Oceanographer
E. S. McKay	Oceanographer
William Tolbert	Oceanographer

##### Office of Naval Research:

E. L. Arnold, Jr.	Fishery Research Biologist (U. S. Fish and Wildlife Service, Galveston, Texas)
-------------------	--

#### I. Northern Leg

##### Fish and Wildlife Service:

Jack W. Gehringer	Chief Scientist
V. L. Strock	Administrative Assistant
Clyde C. Bryant	Chemical Aid
Charles P. Goodwin	Chemical Aid

##### Navy Hydrographic Office:

Melvin Light	Senior Oceanographer
E. S. McKay	Oceanographer
William Tolbert	Oceanographer
Robert O. Zeller	Oceanographer

### EXPLANATION OF DATA SHEETS AND TABLES

#### Oceanographic and Chemical

Each of the items appearing on the station data pages is explained below. All doubtful data are indicated and were not used in the construction of the curves from which the interpolated values (standard depth values) were derived. Observed values which were obviously false were omitted entirely. A dash in a table means that no value was available. Interpolations for standard depth values for temperature, salinity, sigma-t, and oxygen are IBM calculations; those for the chemical constituents were derived from straight lines between observed values.

The profiles of salinity, temperature, and density were prepared from these data, and appear as figures 5-20.

1. Cruise Number. The first cruise over the established station pattern (fig. 1) was numbered Gill 1, and subsequent cruises, Gill 2 through Gill 9 (only Gill 8 is covered by the present report).
2. Station Number. Stations are numbered consecutively, starting with one, at the beginning of each cruise. The station pattern and numbers as shown in figure 1 were maintained on each cruise. If a station or series of stations was not occupied, these station numbers are omitted. Regular stations have numbers only; standard and special stations are specifically indicated.
3. Date. Month, day, and year are given.
4. Latitude and Longitude. The position of the station is given in degrees and minutes.
5. Time. Given in Greenwich Mean Time and is that hour nearest to the start of the first cast.
6. Depth. Is the observed uncorrected sonic sounding for the station, recorded in meters.
7. Wind. Wind speed is given in meters per second. Direction from which the wind blows is coded in degrees true to the nearest ten degrees. The last zero is omitted. North is 36 on this scale and calm is 00. See table 1, "Compass Direction Conversion Table for Wind, Sea, and Swell Directions."
8. Barometer. The barometric pressure is coded in millibars, neglecting the 900 or 1000. Thus 996 millibars is coded as 96 and 1008 millibars is coded as 08.
9. Air Temperature. Dry bulb and wet bulb temperatures are entered to the nearest tenth of a degree (centigrade).
10. Humidity. The percent of humidity is coded directly.

11. Weather. Weather is coded as indicated in table 2, "Numerical Weather Codes-Present Weather."
12. Cloud. Cloud type and amount are coded as indicated in table 3, "Cloud Type"; and table 4, "Cloud Amount."
13. Sea. Sea direction and amount are coded as indicated in table 5, "Sea Amount"; and table 1.
14. Swell. Swell directions and amount are coded as indicated in table 6, "Swell Amount"; and table 1.
15. Visibility. Visibility is coded as indicated in table 7, "Visibility."
16. Water Transparency. Given as meters to which a Secchi disc is visible.
9. Carbohydrates (Arabinose). These values are given in terms of milligrams per liter to the nearest 0.1 of a unit. Collier et al. (1953) presented a technique for estimating certain elements of the organic materials in sea water which react to the test for carbohydrates. The carbohydrate values are given as arabinose equivalents, and are not necessarily the actual concentrations of carbohydrate substances.
10. Proteins (Tyrosine). These values are given to the nearest 0.1 of a unit as milligrams per liter of protein material in sea water, which reacts to the test for tyrosine.

#### Biological

#### Subsurface Observations

1. Sample Depth. Observed (actual) depth of each sample is given in meters. Interpolated values at standard depths are also given. The standard depths in meters are: 0, 10, 20, 30, 50, 75, 100, 150, 200, 250, 300, 400, 500, 600, 700, 800, 1000, 1200, 1500, 2000, 2500, 3000, and thence every 1000 meters.
2. Temperature. The centigrade temperature is given in degrees and hundredths.
3. Salinity. Salinity is given in parts per thousand to two decimal places.
4. Sigma-t. To convert to density divide by 1000 and add 1. Thus, a sigma-t value of 22.35 converts to a density of 1.02235.
5. Dissolved Oxygen. These values are given in milliliters per liter to two decimal places.
6. Total Phosphorus. Values are given in microgram atoms per liter to the nearest 0.1 of a unit.
7. Inorganic Phosphate. Values are given in microgram atoms per liter to the nearest 0.1 of a unit.
8. Nitrate-nitrite. These values are given in microgram atoms per liter to the nearest 0.5 of a unit.
1. Plankton volumes (Gulf III sampler), table 8. The position given is that at beginning of the tow. The depth of the haul is given from 0 to the greatest depth reached. The volumes as given are "wet volumes" (procedures for determination were given under methods in report for cruise 1). Very few samples contained large organisms such as jellyfish (which were removed), so that the volumes represent smaller organisms.
2. Plankton volumes (Gulf IA High-speed sampler), table 9. The position given is that at the center of the tow. All tows were made at the surface. The volumes as given are "wet volumes" (procedures for determination were given under methods in report for cruise 1). Very few samples contained large organisms such as jellyfish (which were removed), so that the volumes represent smaller organisms.
3. Numbers of plankton organisms per cubic meter of water (Gulf III sampler), table 10. The procedures for plankton tows, methods for sorting and counting, and calculations of numbers of organisms were described under methods in report for cruise 1. Counts are given for major groups as indicated.
4. Numbers of plankton organisms per cubic meter of water (high-speed sampler), table 11. The procedures for plankton tows, methods for sorting and

counting, and calculations of numbers of organisms were described under methods for cruise 3. Counts are given for major groups as indicated.

5. Numbers of plankton organisms per cubic meter of water (continuous plankton sampler), table 12. Description of this sampler, its use, and methods of calculating numbers of organisms were given under methods in report for cruise 1. Counts are given by compartment for major groups as indicated.
6. List of the species of fish in dip-net, trolling, and stomach contents collections (D-dip net; T-trolling; S-stomach contents), table 13. The species are listed in alphabetical order, followed by symbols indicating method of capture.
7. Numbers and species of fish taken by trolling, table 14. The stage of gonad development is based on International Council classifications of gonad maturity for the herring (International Councils Rapports et Proces-Verbaux des Reunions, Vol. LXXIV, pp. 117, March 1931). The scale is only a guide to general classifications and must be treated as such.

This scale follows:

- Stage I. Virgin individuals. Very small sexual organs close under vertebral column. Wine-coloured torpedo-shaped ovaries about 2-3 cm. long and 2-3 mm. thick. Eggs invisible to naked eye. Whitish or grayish brown knife-shaped testes 2-3 cm. long and 2-3 mm. broad.
- Stage II. Maturing virgins or recovering spents. Ovaries somewhat longer than half the length of ventral cavity, about 1 cm. diameter. Eggs small but visible to naked eye. Milt whitish, somewhat bloodshot, same size as ovaries, but still thin and knife-shaped.
- Stage III. Sexual organs more swollen, occupying about half of ventral cavity.

Stage IV. Ovaries and testes nearly filling 2/3 of ventral cavity. Eggs not transparent, milt whitish, swollen.

Stage V. Sexual organs filling ventral cavity. Ovaries with some large transparent eggs. Milt white, not yet running.

Stage VI. Roe and milt running (spawning).

Stage VII. Spents. Ovaries slack with residual eggs. Testes baggy, bloodshot. Doubtful cases are indicated by quoting two stages e.g. "St. I-II, St. VII-II," etc.

8. Numbers and species of fish taken by dip net, table 15. There is shown, by family, the genera and species taken. Numbers of specimens from each station are given in parentheses, followed by the approximate size or size range of standard length, in millimeters.

#### ACKNOWLEDGMENTS

Acknowledgment is made to the following agencies and individuals for contributions in securing and processing the material presented. To the Navy Hydrographic Office for their cooperation in planning and executing the field program and for processing the physical oceanographic data. To the Office of Naval Research, and Dr. Sidney R. Galler in particular, for help in planning and executing the field program. To the Georgia Game and Fish Commission for their cooperation in the biological studies; through Frank T. Knapp, biologist. To Dean F. Bumpus of the Woods Hole Oceanographic Institution for preparation of the salinity, temperature, and density profiles which appear as figures 5-20.

From our own staff special recognition is due: Frederick H. Berry for identification of dip-net and stomach content material; Hugh M. Fields, Donald Moore, Louis E. Voge, and Melba C. Wilson for the plankton organism identifications and counts; Edward Cohen (formerly chemist) for chemical

determinations; and Joseph E. Moore for assistance in assembling the physical and chemical data. We also appreciate the assistance of other members of the staff who aided in one way or another; Charles P. Goodwin, Herbert R. Gordy, Jayne E. Buchanan, Mabel Jo Gay, Mary E. Cobb, and E. Reid Poe. Acknowledgment is made of the excellent cooperation of crew members of the M/V Theodore N. Gill and Captain Mauritz C. Fredricksen in particular.

<u>Decapterus punctatus</u>	-Reg. 48, (1) 48 mm. Reg. 54, (30) 11.5-21.5 mm. Reg. 57, (1) 19.5 mm. Reg. 63, (1) 43.5 mm. Reg. 67, (3) 20-27 mm. Reg. 71, (1) 39 mm.
<u>Trachinotus carolinus</u>	-Reg. 47, (1) 11.0 mm.
<u>Caranx crysos</u>	-Settlement Point, (18) 24.5-70.5 mm. Reg. 8, (1) 20.7 mm. Reg. 18, (1) 12.2 mm. Reg. 28, (1) 19.6 mm. Reg. 29 to Reg. 30, (1) 15.6 mm. <u>/1</u> Reg. 65, (7) 71-82 mm. Reg. 71, (1) 82.5 mm. Reg. 77, (2) 76-83 mm.
<u>Caranx ruber</u>	-Settlement Point, (25) 25-49.5 mm. Reg. 8, (1) 19.8 mm. Reg. 27, (3) 23-29 mm. Reg. 63, (1) 19.9 mm. Reg. 64, (1) 94 mm. Reg. 65, (1) 41.5 mm. Reg. 80, (3) 26-30 mm.
<u>Caranx bartholomaei</u>	-Reg. 6, (1) 14.3 mm. Reg. 18, (1) 18.5 mm. Reg. 27, (1) 19 mm.
<u>Caranx latus</u>	-Settlement Point, (5) 31.9-39.6 mm. <u>/1</u> Reg. 29 to Reg. 30, (1) 21.8 mm. <u>/1</u>
<u>Alectis crinitus</u>	-Reg. 20, (1) 14 mm.
<u>Chloroscombrus chrysurus</u>	-Reg. 54, (2) 18.5-19 mm.
PRIACANTHIDAE	
<u>Pseudopriacanthus altus</u>	-Reg. 54, (1) 16.5 mm.
LUTIANIDAE	
<u>Lutianus sp.</u>	-Settlement Point, (3) 13-14 mm.
KYPHOSIDAE	
<u>Kyphosus sectatrix</u>	-Settlement Point, (1) 15.4 mm. Reg. 18, (1) 33.3 mm. Reg. 65, (1) 12.7 mm. Reg. 80, (2) 11.3-13.2 mm.
<u>Kyphosus incisor</u>	-Reg. 65, (1) 14.3 mm. Reg. 73, (1) 34.5 mm. Reg. 78, (1) 13.5 mm. Reg. 80, (1) 15.5 mm.

/1 Exact position unknown.

Table 15.--Numbers and species of fish taken by dip net (cont'd)

<u>Species</u>	<u>Location of capture, number and size range (in standard length) of specimens</u>
<b>POMACENTRIDAE</b>	
<u>Eupomacentrus</u> sp. ?	-Settlement Point, (7) 10-13 mm.
<u>Abudefduf</u> <u>saxatilis</u>	-Settlement Point, (1) 12 mm. Reg. 27, (1) 13 mm. Reg. 50, (1) 15.5 mm. Reg. 55, (2) 21-26 mm. Reg. 65, (1) 13.5 mm. Reg. 71, (1) 17.5 mm. Reg. 74, (4) 16.5-24.5 mm.
<b>ECHENEIDAE</b>	
<u>Phtheichthys</u> <u>lineatus</u>	-Reg. 71, (1) 89 mm.
<b>BALISTIDAE</b>	
<u>Balistes</u> <u>capriscus</u>	-Reg. 18, (1) 27 mm. Reg. 55, (1) 60 mm.
<u>Canthidermis</u> <u>sufflamen</u>	-Settlement Point, (2) 12.5-21.5 mm. Reg. 18, (4) 8.5-20 mm. Reg. 71, (1) 250 mm. Reg. 80, (1) 34.5 mm.
<b>ALUTERIDAE</b>	
<u>Monacanthus</u> <u>ciliatus</u>	-Settlement Point, (15) 13.5-21.5 mm. Reg. 48, (1) 18.5 mm. Reg. 54, (1) 24 mm. Reg. 55, (15) 15.5-21.5 mm. Reg. 67, (1) 15.5 mm. Reg. 78, (1) 18 mm.
<u>Monacanthus</u> <u>tuckeri</u>	-Settlement Point, (5) 18.5-23 mm.
<u>Stephanolepis</u> <u>hispidus</u>	-Reg. 13, (6) 22.5-30 mm. Reg. 20, (46) 7.5-15.5 mm. Reg. 21, (6) 15.5 mm. Reg. 29 to Reg. 30, (5) 14-27.5 mm. <sup>/1</sup> Reg. 33, (6) 20.5-32 mm.
